Getting paid: connecting Stripe

Customers pay you by card through Stripe. Your company is the merchant, and the money goes straight to your bank.

Steps

1. Open Configure, then Taking payments.
2. Press the button to set up payments. You go to Stripe’s own pages to give your business and bank details.
3. When you come back, HQ asks Stripe where things stand and shows anything still missing.
4. If Stripe asks for more, press Ask Stripe again after you have given it.

Good to know

Card details never touch HQ. Customers type them on Stripe’s page.

Stripe’s card fees are taken by Stripe from each payment. HQ never holds your customers’ money.
