Crews and trainees

A job can need more than one technician, and an apprentice can ride along to learn without counting as one of them.

Steps

1. Open the service and set how many technicians it needs.
2. Each seat on the job is offered and accepted separately. The job is confirmed when every seat is filled.
3. To send an apprentice, add them as riding along with their trainer.

Good to know

A technician can ask to do a job with a different crew. The request waits for Approve on the Requests screen.

If a trainer comes off a job, the office decides what the apprentice does. Nothing is decided for you.
