Confirming and undoing what Orsa does

Orsa shows everything it would change before anything is saved, and a whole batch can be undone in one press.

Steps

1. Read the list of changes Orsa shows. Nothing is saved yet.
2. Press Confirm to make them all. A refund, voiding an invoice or erasing a customer is marked Asks you twice, and needs a second Confirm.
3. Changed your mind? Press Undo all of it to put the whole batch back.

Good to know

A change that cannot be put back says so before you confirm it.

Every change is recorded under your name, marked as done through Orsa.
