A page looks broken after an update

After HQ is updated, your browser may still be showing the old page. A fresh load usually fixes it.

Steps

1. Reload the page.
2. If it still looks wrong, open it in a private or incognito window.
3. Still wrong? Press Something's off on the page. It sends us exactly what you saw.

Good to know

Something's off gives you a reference to mention if you contact us.
