Setting up your price book

Your price book holds your services, parts and labor rates. Every Quote and invoice is worked out from it.

Steps

1. Open Services to add the services you offer, or start from the list for your trade.
2. Open Prices to set what each service, part and labor rate costs you and what you charge.
3. Set your trip charge, after-hours rates and tax.

Good to know

The price book does all the arithmetic, in whole cents. The AI never works out a price.

A service with no price means the customer gets a Quote on site.

Prices more than six months old are flagged so you remember to check them.
