Adding chat to your website

One line pasted into your website adds a chat button that runs the same conversation as a text.

Steps

1. Open Configure, then This company, and find The chat on your website.
2. Copy the line shown there.
3. Paste it into your website, just before the closing body tag. Your web designer can do this in a minute.

Good to know

What customers send in the chat lands in Conversations with everything else.

If the line ends up somewhere it should not, press Make a new key. The old line stops working until you paste the new one.
